Phillips Drill Bit	Level
7/16" Socket Wrench	Shovel
Short Handled Phillips Screwdriver	

In the box

A Decorative Post 1 pc	B Newspaper Holder 2 pcs	C Mounting Bracket 2 pcs	D 1/4" x 3" Galvanized Lag Bolt 2 pcs
E Plastic Snap Cap 2 pcs	F #10 x 3" Steel Crew 2 pcs	G 1/4" x 1 1/4" Truss Screw 4 pcs	

Not Included: *4 x 4 Wood Post (actual dimensions are 3.5" x 3.5"; 72in Length Recommended), Mailbox, and Mailbox Mounting Hardware*

01

Set the 4×4 post

Dig a 24" deep hole and set a 4x4 wood post with 48" above ground. Fill with pre-mix concrete, level the post and let it cure fully.

02

Slide on the post

Lower the decorative post (A) over the 4x4 until the base sits flush with the ground.

03

Fasten the bracket

Hold a mounting bracket (C) against each side of the post, directly opposite each other. Secure the top of each bracket with two lag bolts (D) using a 7/16" socket. Drive two steel screws (E) through the bottom of each bracket, then press the snap caps (F) over the screw heads.

04

Prep the holders

Each newspaper holder (B) has four starter holes on its underside. Pre-drill the top four holes on both holders with a 5/16" bit.

05

Attach the holders

Set each holder on its bracket. Drive four truss screws (G) through the drilled holes and into the nuts already molded into the bracket. A short-handled screwdriver fits best inside the holder.

06

Mount your mailboxes

Pre-drill four 3/8" holes through each mailbox and its holder. At each hole, secure with a nut, bolt, and washer. 2" bolts are recommended (mailboxes and hardware not included). A medium mailbox (up to 8 lbs) is recommended.

Prefer no digging or concrete?

A ground screw (sold separately) sets the post in minutes. The ground screw works best in standard soil and isn't suited to rocky or sandy conditions.

A little care.

Clean with a soap solution and high-pressure water for best results.

Built to last.

Polyethylene construction resists weather, rot, and fading season after season.
